SUMMARY

Computer Science and Data Science graduate with experience turning raw data into decisions people act on. I have worked on cleaning and validating source data, modeling it in SQL, and building the dashboards and experiments that answer the relevant business questions. Strong in Python, SQL, Tableau, and full-stack development, with A/B tests and analytics shipped to real teams.

TECHNICAL SKILLS

Languages: Python (Pandas, NumPy), SQL, JavaScript, TypeScript, Java

Analytics & BI: Tableau, Excel (pivot tables, lookups, modeling), D3.js, KPI design, segmentation, dashboarding

Statistics & Experimentation: A/B testing, hypothesis testing, mixed-method analysis, usability research

Data Engineering: PostgreSQL, PostGIS, DuckDB, ETL, data modeling, data quality validation

Tools: Jupyter Notebook, scikit-learn, FastAPI, React, Firebase/Firestore, Docker, Git/GitHub, Render

EXPERIENCE

Data Product Developer | OmniLead Mobile Sales Platform

Oct 2025 - Present

- Defined KPIs and tracking requirements with a 14-person field sales team; the 3-week Jacksonville pilot lifted appointments set, held, and converted by roughly 12%
- Built a Python ETL pipeline for monthly public parcel releases (decode, normalize, validate, load), scaling coverage from 400K Jacksonville addresses to 1.4M Tennessee parcels
- Designed the PostgreSQL/PostGIS schema and source-to-target mappings, tested in Docker, and deployed to Render behind a FastAPI service powering a live iOS app
- Wrote Python analyses of knocking behavior, interaction outcomes, and rep efficiency across sales sessions, surfacing the patterns that fed the in-app demographics for ideal customers on an individual and team basis

Software Validation Analyst - AI Training | DataAnnotation

Jun 2025 - Present

- Evaluated AI-generated code and data workflows against detailed requirements in open-source repos such as Pandas, PapaParse, and other open-source projects, documenting defects and correcting flawed reasoning or logic
- Wrote fine-grained test cases for ML pipelines and data visualizations, checking transformation accuracy and output consistency

PROJECTS

Financial Literacy Learning Platform | Senior Capstone

D3.js, Firebase, Prolific

- Built interactive D3.js simulations for budgeting, compound interest, and concentrated vs. diversified portfolios, driven by sample or user-entered financial data
- Ran 5 Prolific usability studies and two 12-participant A/B-test waves on a state-aware AI coach, scoring think-aloud recordings against a custom made engagement rubric
- Higher-engagement participants averaged 1.1 points better on a 10-point financial-literacy assessment; owned the Firebase/Firestore infrastructure end to end

Airline Customer Experience Dashboard

Tableau, SQL

- Analyzed 129,880 passenger surveys; pivoted 14 service-rating fields into a 1.8M-row long-format extract and built calculated KPIs for satisfaction, total experience, and digital experience
- Found Business-class satisfaction at 69.4% vs. 18.8% for Economy, with online boarding the widest service gap (0.90/5); wired filter actions across class, loyalty, travel purpose, age, and distance

Aimilytics - KovaaK's Performance Analytics Platform

Python, Next.js

- Built a Python pipeline that time-aligns 1,000 Hz mouse telemetry, event CSVs, and video-derived detections, auto-segmenting runs and retaining 90-95% of records after quality checks
- Ranked technique issues by prevalence, correlation, estimated cost, and confidence using reaction, path-efficiency, and overshoot metrics
- Mapped telemetry and target centroids into 3D space with sensitivity and field-of-view adjustments, hand-validating trajectory overlays before trusting the derived metrics

Hospital Navigation System | Brigham and Women's Hospital Collaboration

React, Express

- Led an 11-person team as Scrum Master through sprint planning, standups, and retrospectives on a live client project
- Built a graph-based pathfinding backend and multi-floor navigation UI with text directions and elevator/stair routing

EDUCATION

Worcester Polytechnic Institute

B.S. Computer Science & B.S. Data Science

GPA: 3.9 / 4.0 | Dean's List - Every Semester

Worcester, MA

Graduated May 2026
